EXPERIENCE

Automotive dealership uses Call Analytics technology to drive appointments and better service.

Challenge

A dealership business development manager of one of the world's largest automotive manufacturers considers the phone a key operational component. "Much of our marketing efforts are aimed at getting customers to call—whether it's to set an appointment, get a quote for service or inquire about a car. This makes understanding who answers the phone, and the quality of those interactions, mission-critical."

However, after the initial weeks of rolling-out a dedicated customer service phone program, he noticed the dealership had a high failed call rate. Using Marchex Call Analytics technology, he dug deeper and identified the exact issue. He found the service department was slow to answer the phone leading to a high rate of failed calls. Because of these lost opportunities, the dealership was leaving a lot of money on the table.

Solution

One of this business development manager's favorite aspects of Marchex's Call Analytics technology is, "its ability to see who is picking up the phone and who isn't answering." After noticing the service department's high failed call rate, he called a meeting with the service manager and team. They agreed on a new "3-ring rule" that required the service department to pick up within 3 rings. In addition, the business development manager requested a login for the service department manager, and taught him how to use the Marchex Call Analytics dashboard so he could ensure staff was complying with the new rule. The manager also worked with the sales department to return all missed service department calls.

Results

The dealership has since experienced a drastic drop in failed calls. They also saw an increase in the number of service appointments. Thanks to Marchex, the dealership business development manager obtained a series of actionable insights that have "given us more control over the phone."
